

## Lab 8

The records of the students enrolled in a hypothetical computer science class, along with all the relevant information, are kept in the data file *classLis.txt*

Design and implement a java program called StudentInformation, which asks the user to enter a student's name, your program then displays the student's information if the name is found in the file.

Here are some sample program runs:

Please enter the student's name: **Annette Adams**

Name: Annette Adams  
ID: 18273640  
Final: 98

Please enter the student's name: **Robin Love**

No match.
